

“Close, from a Distance” > HEALTHCARE CENTRES

We promote the safety of patients and healthcare personnel by providing a more fluid, safe and efficient means of communication among them. We have improved the channels of communication in healthcare centres in the following ways:

- Window and wireless intercom systems.
- Portable amplifiers for healthcare personnel, such that the patient can listen at a safe distance, offering increased safety for both parties.
- TV stands for providing patient information in a way that is less dependent on interaction with the healthcare personnel.
